

## SynchronEyes™ classroom management software

Students are gazing intently at their screens – they are clearly concentrating. What they're concentrating on, though, isn't always clear. Your students could be honing their arcade skills or checking out their favorite singer's bio. Or, they might be stuck in the middle of a research project. But making your way through the classroom and checking screens takes time, especially when you have to stop and answer the same question again and again. The bell rings before you've reached half the class.

With SynchronEyes™ classroom management software you know exactly what your students are working on, and you can answer all their questions. Simply pull up thumbnail views of all students' screens on your desktop.

### In touch with students

SynchronEyes software's intuitive interface makes it easy to monitor students' progress. When you see them struggling, you can give individual assistance – confidentially. Students can ask for help without losing face in front of peers, then return to work.

As students click between applications, you can give guidance when necessary. If Internet use or certain applications are inappropriate, you can block them for one or every student. You can even lock all computers and keyboards.

### Flexibility for teachers

SynchronEyes software helps keep students focused but also keeps you responsive to the spontaneous twists and turns of your lessons. Broadcast your screen to the class if a concept needs reinforcement. Share an individual's work on screen to provoke discussion, or arrange chat groups and screen-sharing. To assess understanding, create a quiz by importing questions from XML quiz bank files. Once the software has marked the quiz, you can easily view the results.

Whether your technology is wired or wireless, whether it includes a handful of computers or thirty mobile devices, SynchronEyes software facilitates classroom communication. You can carry on teaching, knowing that your students' work is secure and that they are concentrating on the task at hand.

Works with the

**SMART Board™**  
interactive whiteboard

"I have been using SynchronEyes software for three years now, and I love it. I can control who is on the Internet, and when. I can lock students out of the computers during lectures and while giving directions. I can even create online tests – the software grades the tests and immediately gives each student a grade. I am not sure how I managed before I had this software."

**Theresa Taylor, business teacher,

## System requirements

### System requirements Windows® operating systems

#### Teacher station

Pentium® III processor at 500 MHz or equivalent • 128 MB of RAM • Windows 98 SE, 2000, Me, XP, Windows Vista™ or Windows Server® 2003 • 50 MB of free hard disk space • 800 x 600 or higher resolution display with full color • Microsoft® Internet Explorer® 5.0 Internet browser or higher • DirectX 7.0a • 10 Mbps TCP/IP network interface adapter

#### Student station

Pentium II processor at 300 MHz or equivalent • 64 MB of RAM • Windows 98 SE, 2000, Me, XP, Windows Vista or Windows Server 2003 • 15 MB of free hard disk space • 640 x 480 or higher resolution display with 256 colors • Microsoft Internet Explorer 5.0 Internet browser or higher • DirectX 7.0a • 10 Mbps TCP/IP network interface adapter

#### Student station (mobile devices)

Windows CE 4.2 or greater, including Windows Mobile® 2003 and 2005 • ARM-based processor • 5 MB free storage space

## Increase your power to teach

- **Monitor all screens** – Observe all student screens from your desk, including dual monitors.
- **View screen thumbnails** – Student desktops appear as thumbnail images that you can group, resize and arrange.
- **Arrange thumbnails on screen** – Sort the thumbnails of all student desktops to match your classroom layout, or put them in any configuration you want.
- **Make class lists** – Automatically connect students and create class lists that can include any students connected to your network.
- **Go wireless** – Reach beyond the walls of your classroom to monitor and control students on a wireless network.
- **Add teachers** – Let multiple teachers, aides or administrators monitor student computer screens in your classroom.
- **Connect to mobile devices** – Incorporate devices such as laptops, PDAs and tablet PCs into your class network.

## Create a collaborative classroom

- **Broadcast your screen or any student screen** – Demonstrate a concept or example by sharing your screen or any student screen with the rest of the class.
- **Use with other SMART products** – Control, monitor and write over student computer screens from the SMART Board™ interactive whiteboard just like you would from your own screen.
- **Show video** – Broadcast multimedia files to any student screen or to the entire class.
- **Hand over control to a student** – Choose a student to demonstrate an idea to the rest of the class during your teacher broadcast.
- **Respond to student questions** – Encourage students to ask you questions using the software so everyone can concentrate
- **Create and monitor chat sessions** – Chat with students directly, or create a controlled chat environment between individuals or groups.
- **Take a vote** – Students can vote on a yes-or-no question, and the software will automatically tally the votes.

## Keep students on task and on time

- **Control Web access** – Block Internet access or allow only selected websites to keep students on track.
- **Block applications** – Stop one or more students from accessing any applications you've selected, including games, specific programs or groups of programs.
- **Launch applications** – Remotely launch and close applications on each student's desktop to structure class time.
- **Control a student's computer** – Take or share control of student computers so you can guide them remotely through a particular task.
- **Lock computers** – Prevent distractions by locking down individual computers, selected groups of computers or the entire class.
- **Transfer files** – Send documents to students or collect student assignments without leaving your computer.
- **Turn all computers off** – Shut down all computers simultaneously with a single mouse click.

## Make assessment as easy as 1, 2, 3

- **Quiz students** – Create quizzes with the Quiz Wizard, distribute them from your computer and have the software automatically mark student responses.
- **Analyze results** – View statistics on individual and group performance.
- **Use any format** – Make quizzes that include any mix of multiple-choice, short-answer, matching, ordering and essay-style questions.
- **Import existing quizzes** – Import data from existing text files, including XML quiz bank files.
- **Incorporate symbols and rich text** – Include mathematical symbols and rich-text formatting in your quizzes.

## Install software quickly and securely

- **Make installation simple** – Deploy the software automatically to all computers using an .msi file.
- **Keep your training room secure** – Provide a safe learning environment using 256-bit encryption.
- **Prevent outside access to classroom files** – Ensure that your students' work is protected through teacher authentication.
